

CONTENTS

Authors	VII
Preface	XI
1 Overview on structural evolving areas in vascular surgery	1
1.1 Reorganization and digital renovation of the health system: concrete perspectives in vascular surgery	2
<i>Maurizio Taurino, Pasqualino Sirignano, Stefano Bartoli</i>	
1.2 The revolution of the hybrid room: shared and integrated use of new spaces and technologies	6
<i>Giovanni Tinelli, Simona Sica, Ottavia Borghese, Tommaso Donati, Antonio Luparelli, Francesca De Nigris, Yamume Tshomba</i>	
1.3 Digital transformation in training young vascular surgeons and residents: web-based distance education, advanced simulation, and virtual reality tools	13
<i>Gemmi Sufali, Rodolfo Pini, Stefania Caputo, Antonino Di Leo, Betti Shyti, Andrea Vacirca, Enrico Gallitto, Mauro Gargiulo, Gianluca Faggioli</i>	
1.4 The role of large language models in disseminating vascular scientific knowledge to the general population	18
<i>Walter Dorigo, Claudia Pacciani, Mario D’Oria, Elena Giacomelli, Sara Speziali, Sandro Lepidi, Aaron Thomas Fargion, Raffaele Pulli</i>	
2 Technology boosted diagnosis and advanced procedural planning in endovascular surgery	23
2.1 Robot-mediated vascular ultrasound imaging: a promising technology for vascular diagnosis and screening programs	24
<i>Paolo Zamboni, Giulia Baldazzi, Anselmo Pagani, Alessandro Bertagnon, Saverio Farsoni, Marcello Bonfè</i>	
2.2 Computer modelling and advanced simulation in TEVAR	30
<i>Anna Ramella, Giulia Luraghi, Sara Barati, Giulia De Campo, Jose F. Rodriguez Matas, Jasper de Koort, Tim Mandigers, Irene Fulgheri, Maurizio Domanin, Robin Heijmen, Nabil Chakfe, Frederic Heim, Francesco Migliavacca, Santi Trimarchi</i>	
2.3 3D printing may improve diagnosis and procedural planning of endovascular procedures	37
<i>Antonio Freyrie, Claudio Bianchini Massoni, Alexandra Catasta, Arianna Mersanne, Chiara Martini, Ruben Foresti, Paolo Perini</i>	
3 Endovascular emerging technologies and “super-novel” therapeutical strategies for complex aortic disease	43
3.1 The role of new advanced tools in treating aortoiliac lesions: intravascular ultrasound imaging and intravascular lithotripsy	44
<i>Franco Grego, Michele Piazza, Sabrina Menara, Elda Chiara Colacchio, Michele Antonello, Francesco Squizzato</i>	
3.2 Routine use of CO ₂ : forget iodinated-contrast injuries during complex aortic procedures	49
<i>Paolo Spath, Enrico Gallitto, Federica Campana, Marcello Lodato, Stefania Caputo, Rodolfo Pini, Chiara Mascoli, Andrea Vacirca, Gianluca Faggioli, Mauro Gargiulo</i>	
3.3 Extreme off-label techniques to treat TAAA: physician-modified endografts, in-situ fenestrations, and electrified wire-based maneuvers	59
<i>Davide Esposito, Martina Bastianon, Caterina Melani, Gaddiel Mozzetta, Jessica Lanza, Giuseppe Baldino, Fabio Grimaldi, Enrica Bosisio, Giovanni Pratesi</i>	

3.4	Pushing the limits proximally 1: endovascular treatment of aortic arch disease with branched custom-made devices	65
	<i>Paolo Spath, Jan Stana, Nikolaos Tsilimparis</i>	
3.5	Pushing the limits proximally 2: endovascular treatment of aortic arch disease with physician-modified devices	75
	<i>Ludovic Canaud, Thomas Gandet</i>	
3.6	Pushing the limits proximally 3: novel solutions to treat the ascending aorta, and the challenge of endo-Bentall procedures	83
	<i>Mario Lescan, Martin Czerny</i>	
3.7	Replacing the use of X-rays for endovascular aortic repair: Optical Fiber Based-Technology (FORS)	89
	<i>Jurre Klaassen, Gemmi Sufali, Constantijn E.V.B. Hazenberg, Joost A. Van Herwaarden</i>	
3.8	The current insurmountable limits of aortic endovascular approach: when open surgery will remain the best (or the only) strategy	94
	<i>Andrea Kahlberg, Benedetta Mangili, Nicola Favia, Carlotta Bugna, Roberto Chiesa</i>	
4	The challenge of artificial intelligence	103
4.1	Digital patient data: artificial intelligence, machine learning and sensor technology in the new era of research and clinical data collection	104
	<i>Paolo Servi, Enzo Gentile, Emiliano Chisci, Stefano Michelagnoli</i>	
4.2	What is big data in vascular surgery and how may be used with AI: will randomized controlled trials be replaced?	111
	<i>Jean-Baptiste Ricco, Farid Guetarni, Aurélien Hostalrich</i>	
4.3	Enhancing clinical decision making in AAA diagnosis and treatment with AI: how can it help with prediction of AAA growth, endoleaks and spinal cord ischemia	116
	<i>Venkat Ayyalasomayajula, Stefan P.M. Smorenburg, Dieuwertje Alblas, Patryk Rygiel, Lotte Rijken, Kaj O. Kappe, Jelmer Wolterink, Kak Khee Yeung</i>	
4.4	Artificial intelligence in ultrasounds diagnostics: the future is now	124
	<i>Nicola Reina, Alder Casadei</i>	
4.5	Power is nothing without control: potential downsides of AI-supported chatbots in addressing patient queries about aortic disease	132
	<i>Germano Melissano, Timo Söderlund, Giovanni Tinelli, Andrea Kahlberg</i>	
5	Bioengineering, biomaterials and cell-therapies	135
5.1	Current evidence on vascular biomaterials and future perspectives	136
	<i>Vincenzo Vento, Salomé Kuntz, Anne Lejay, Nabil Chafké</i>	
5.2	New methodological approaches in Med-Tech Research and innovation	143
	<i>Stefano Bonvini, Sara Allievi, Nicola Doppio</i>	
5.3	Actual state and promises of regenerative medicine in vascular and endovascular surgery	150
	<i>Eugenio Caradonna, Flavio Peinetti, Francesco Setacci, Fulvio Ferrara, Carlo Setacci</i>	
5.4	Coupling transcriptomics, proteomics, and immune cell landscape to develop new biomarkers for the diagnosis and monitoring of atherosclerosis	157
	<i>Martina Mutoli, Andrea Rampin, Alberto M. Settembrini, Giovanni Nano, Massimiliano Martelli, Antonino Bruno, Gaia Spinetti</i>
